```
Class Rectangle
{
        public:
                int length;
                int breadth;

                int area()
                {
                        return length*breadth;
                }
                int perimeter()
                {
                        return 2*(length+breadth);
                }
};
```
